IN THE CLAIMS:

Please amend the claims as follows.

1. (Currently Amended) A method of trace activation in a mobile communications system, wherein a mobile station is in communication with a mobile communications network, the method comprising the steps of:

directing a communication from the mobile station to a predefined trace activation number of a tracing facility <u>for activating tracing of the mobile station</u>;

activating <u>tracing</u> at the tracing facility for the mobile station from which the communication originates; and

generating a trace report for the mobile station.

2. (Previously Presented) The method according to claim 1, wherein the directed communication is a call from the mobile station and tracing is activated for the calling mobile station, and the method further comprises the step of:

deactivating tracing when the call is ended.

- 3. (Previously Presented) The method according to claim 1, wherein the directed communication is a message from the mobile station.
- 4. (Previously Presented) The method according to claim 3, wherein the method further comprises a step of:

deactivating tracing when a preset time period is elapsed.

5. (Previously Presented) The method according to claim 3, wherein the method further comprises a step of:

deactivating tracing when a second message from the mobile station is directed to the predefined trace activation number.

6. (Previously Presented) The method according to claim 1, wherein the method further comprises a step of:

defining at least one said trace activation number.

A Sup

- 7. (Previously Presented) The method according to claim 1, wherein the communication is directed to the predefined trace activation number directly from the mobile station.
- 8. (Previously Presented) The method according to claim 1, wherein the communication is forwarded to the predefined trace activation number.
- 9. (Previously Presented) The method according to claim 1, wherein tracing is activated and deactivated automatically at the switching center.

- 10. (Previously Presented) The method according to claim 1, wherein subscriber tracing is activated for the mobile station.
- 11. (Previously Presented) The method according to claim 1, wherein equipment tracing is activated for the mobile station.
 - 12. (Previously Presented) A mobile communication system comprising: at least one mobile station;
- a communications network with which said at least one mobile station is arranged to communicate; and

a tracing facility for tracing at least one of said mobile stations, wherein the tracing facility has a predefined trace activation number for activating tracing of said at least one mobile station in response to a communication from said at least one mobile station to the trace activation number.

13. (Previously Presented) The mobile communications system according to claim 12, wherein the tracing facility comprises:

means for receiving said communication; and means for activating said tracing in response to said communication.

14. (Previously Presented) The method according to claim 1, further comprising: recording all information available to a network concerning a call path, including internal messages of the network.

15. (Currently Amended) The method mobile communications system according to claim 12, further comprising:

recording mechanism for recording all information available to a network concerning a call path, including internal messages of the network.

16. (New) A system for trace activation, wherein a mobile station is in communication with a mobile communications network, the system comprising:

directing means for directing a communication from a mobile station to a predefined trace activation number of a tracing facility for activating tracing of the mobile station;

activating means for activating tracing at the tracing facility for the mobile station from which the communication originates; and

generating means for generating a trace report for the mobile station.
